

# TDI-Brooks International, Inc.

## Commitment to Health, Safety, and the Environment

### Management Commitment:

Senior Management includes the company's Officers and Directors, with direct authority to set and enforce policy on all matters pursuant to sustaining of true, systematic, and effective safety. This includes our leadership responsibility to model desired behavior, champion HSE systems compliance, and ensure that resources essential to an effective safety system are provided. We are committed to providing our employees, contractors, clients, and visitors with a safe environment in which to work. We strive to conduct all operations with zero accidents and no harm to personnel or the environment. We intend to continually improve a safety, health, and environmental (HSE) program that conforms to, or exceeds, industry best practice, including the nine published IOGP Life Saving Rules. This program commits to embody proper attitudes toward injury and illness prevention and response.

### Safety Responsibilities:

The safety and health of every employee and the protection of the environment are our highest value and priority. Management is to provide the proper equipment, tools, training, supervision, and policies to ensure a safe work environment. Each employee must take responsibility for performing work in compliance with these SMS objectives, standards and practices. Real safety will only be achieved through teamwork, good-faith, self-honesty, critical thinking, and selflessness. Employees, contractors, and client representatives must work together with a spirit of *safety comradery* to promote our safety culture and take every reasonable measure to work together in a safe and environmentally-responsible manner.

### Safety Objectives:

We maintain a Safety Management System with these objectives. We will:

- **Provide** for safe practices in ship operation and a safe working environment,
- **Assess** all material risks to our ships, personnel, and the environment,
- **Establish** appropriate safeguards to mitigate these risks,
- **Improve** the safety management skills of our personnel ashore and aboard our ships,
- **Prepare** for safety and environmental protection emergencies,
- **Ensure** compliance with regulations and that industry best practice is met or exceeded.

We intend to achieve these objectives and continually work to improve our system.

  
James M Brooks, President
