Bridge Memorandum #26: Vessel Satellite Network Systems, Computers and Servers

Masters,

Please post this memo in appropriately visible locations.

We have a reoccurring problem regarding out ships networks, where personnel (TDI, contract, or clients) make modifications to the ships network, or other data communications systems without coordinating such changes with the ID department. This has caused complete system failure, expense, and loss of primary communication systems for extended periods of time at one point or another on every vessel in our fleet

NO ONE may touch, tamper, or "fix" these systems unless under the direct guidance of the IT department. If a client or contractor is insistent on attempting to alter our systems in any way, please contact Chris King, Director of Information Technology immediately.

Richard Byno

Director of Operations

Roy Robbins

Port Captain / DPA
