

Bridge Memorandum #40: Arrival / Departure Procedure

All TDI Vessels,

It is the responsibility of the Engineering and Bridge officers to verify safe operations for Port arrivals / departures. This includes completing the arrival and departure checklists for each associated department.

From this point going forward, Engineering will be required to have one (1) online generator connected to the bus and one (1) generator in running status ready to be put online in case of failure or emergency.

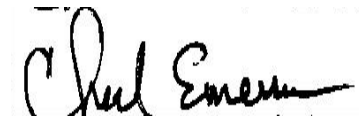

Actions to be taken:

- Office to amend the Engineering arrival / departure checklist to include new generator status.
- Office to place new checklists in HELM to replace current version
- Engineering department to acknowledge with the Port Engineer of compliance
- Verify with Port Engineer once you have reviewed and acknowledge receipt.

Roy Robbins

Port Captain / DPA

Charlie Emerson

Port Engineer
