

## SOP-PRT-005 Equipment Resets

- 1.0 [Introduction](#)
- 2.0 [Responsibility](#)
- 3.0 [Procedures](#)

### 1.0 Introduction

This SOP describes the equipment requiring re-starting and protocols to be followed in the event of vessel power loss.

### 2.0 Responsibility

The Chief Engineer is responsible for ensuring that all equipment is properly re-started on the vessel following a loss of power. The Chief Engineer will direct the engineering staff to begin re-starting critical equipment first and then all equipment impacted by the loss of power on the vessel.

### 3.0 Procedures

Should the vessel lose all power, power will need to be restored to the main switchboard first. If the vessel suffers a partial power loss, the areas impacted will need to be identified. Once the power has been restored to the main switchboard, the following equipment will need to be re-started and checked. Engineers should review start up protocols for all equipment requiring start-up to ensure that equipment is properly brought back on line.

Equipment	Location
MSD Plant	MSD Room
Watermaker	MSD Room
F.O. Centrifuge	Engine Room
ARPA-NavNet	Bridge
A/C Cooling Pumps	Passageway to E/R
Galley Stove	Breaker in Galley
